Best SCALE Model Contest 2021: Contestants – 2/2

E. Walker, S. Skutnik, A. Shaw (ORNL)

PWR 2D multi-lattice fuel shuffle model in Polaris · Matthew Jessee, Senior R&D Staff, RNSD, Power Reactor Modeling Group (with an assist from Travis Zipperer PNNL) · Polaris only supports two geometry types ASSM – single 2D assembly RFFI - single 2D assembly with adjacent multi-slab reflector · PWR 2D multli-lattice can be simulated in ASSM mode as a single mega lattice, and displacement maps can be used to adjust pin locations to account for interassembly gaps · This model displays Polaris's .. displacement map capability (dxmap dymap) - history and insert cards to show insert and removal of fresh fuel assemblies and shuffle of previous cycle assemblies • 5 18-month cycles to build in equilibrium cycle with 3% enriched · Cycle 6 is a transition fuel cycle with 8% enriched fuel 51-step depletion case runs in 9 hours in SCALE 6.3 A. GODFREY, "VERA Core Physics Benchmark Progression Problem Specifications," CASL-U-2012-0131-004, CASL (2014)

M. Dupont (ORNL)

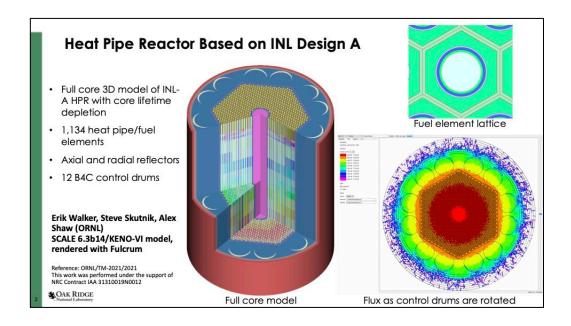

Thank you for your submissions!
